# **IP Office Server Edition**

Seamless Growth, Simple Management and Reduced TCO for Midsize businesses

### Overview

IP Office Server Edition is the ideal solution for midsize businesses, delivering intelligent Unified Communications, scalable growth and seamless management. Server Edition enables businesses to quickly and easily add users to an existing office or even connect a remote office, all from the central HQ. A Linux server is the heart of Server Edition, running IP Office software, Voice Messaging and Unified Communications (Avaya one-X<sup>®</sup> Portal for IP Office). Server Edition delivers true Centralized Management and Licensing for *all* users, across *all* locations, in one, intuitive, web Interface.

# Capabilities

- **Deployment Options** You choose the approach that works best for your environment. Virtualize on your servers, use Avaya servers, use Avaya appliances, or use any combination of the three.
- Expanded scale/capacity With a Linux server – Server Edition means seamless growth, ... up to 2,000 users at a single site or across 32 locations, with support for up to 150 voicemail channels.
- Centralized web-based management Simple administration is the cornerstone of *Server Edition*. From the one intuitive interface, the System Administrator has one view of all users on a single site or across up to 32 locations. Using system status can, at a glance, let the Administrator know of any potential issues that could affect system performance such as over utilized trunk lines, voice ports, and bandwidth utilization.
- **Centralized Licensing** *Server Edition* holds all common licenses centrally, making it cost effective to purchase discounted license packs and easy for

a System Administrator to assign user solutions to employees anywhere within the network.

• **Resilience built-in** – midsize businesses demand reliability, *Server Edition* delivers. Within a multi-site network where *Server Edition* is deployed across remote locations, in the unlikely event of a system outage, the IP phones with active calls stay connected, and idle IP phones simply re-register to an alternate server. Voice messaging is also critical to many businesses; *Server Edition* backs-up messages and greetings to an alternate Linux server.

#### **Benefits**

**Cost effective growth** – whether it's adding a user or a location, *Server Edition* easily grows with any expanding company

**Low TCO** - Day to day administration of users, groups and call routing across the entire network is easy from the centralized, Graphical User Interface, speeding Moves, Adds and Changes (MAC's) **Non-stop communications** the failover capabilities of *Server Edition* for both real time and voice messaging helps assure that businesses don't miss a beat
